Agenda

- Artificial Intelligence
- Brain and neuron
- Synapses, the core of neural networks
- Neuron, equation, and matrix

Intelligence

- One's **capability** for logic, understanding, self-awareness, **learning**, planning, creativity, and problem solving
- The **ability** to **perceive** information, and to **retain** it as knowledge to be **applied** towards adaptive behaviors within an environment
- Human Intelligence = Natural Intelligence

Artificial Intelligence

- Intelligence exhibited **by machines**
- A **computerized version** of the human intelligence
- **Theory** and development of computer systems able to perform tasks such as visual perception, voice recognition, decision-making, and translation between languages

How can machines
get *Artificial* Intelligence?

How can human
get *natural* intelligence?

What happens inside
the human brain?

Neuroanatomist

신경해부학자

Santiago Ramón y Cajal, 1852-1934

Cerebellum(소뇌) : controls muscles

Neurons in a bird's brain

Ramón y Cajal's drawing of **the neurons in a bird's cerebellum** – a part of the brain.

Brain of Human

100 billion neurons
more than
the number of stars
in the universe

So, what happens inside?

From a DVD that comes with the illustrated medical atlas, The Human Brain, DK Publishing UK.

Simulation(signaling)

A brain in a supercomputer | Henry Markram

Connection between neurons

Synapse

The Brain—Lesson 2—How Neurotransmission Works

Neurotransmitter in synapse

신경전달물질

Various amount of
neurotransmitter in
each synapse

Connection between neurons

No neurotransmitter
No signal to the
nucleus
No connection

small
week

big
strong

What happens if

Alzheimer's

Loss of memory, Paralysis

Our memory
thinking
moving
emotion
and everything

Experience and
the adjusting of the
amount of
neurotransmitter

Experience \rightarrow Adjusting

3 variables implementation with Python

Learning

Happiness

Stress

Stress/Error/Cost/Loss function

S/W implementation
→ AI

A Neuron with Multiple Inputs

A Neuron with 1 Input

h, Hypothesis

A **hypothesis** (plural **hypotheses**) is a proposed explanation for a phenomenon.

Explanation about **the way a neuron works in**.

Output of a neuron, prediction

Action of a neuron

$$h = wx$$

Application: Wage Calculator NN

- Knowledge: 1 hour working(**input** x) \rightarrow 1USD(**groundtruth** y) payment
- How much you get for 3 hours? (**prediction**)
- Finding the correct value of $W \rightarrow$ Learning

x (hour)	w	Output of a neuron	y (wage)	Error	Reaction
1	4(random)	4	1	4-1	scolding seriously
1	2	2	1	2-1	ordinarily
1	1.5	1.5	1	1.5-1	not bed
1	1.3	1.3	1	1.3-1	good but not enough
1	1.1	1.1	1	1.1-1	acceptable

Scolding a dog/dolphin/child
 automatically updates the connection
 strength(w)

to make the error smaller in
 the next step.

Learning

is to find the optimal value of parameter (w) to predict correctly.

the amount of
neurotransmitter

Drawing a neuron

Representing the below equation:

$$h = 1x$$

$$h = 1x$$

Matrix notation

$$(x)(1) \rightarrow (h)$$

Simplified version

$$(1)(1) \rightarrow (h)$$

Where is the synapse/connection?

Matrix notation

$$\begin{pmatrix} x \end{pmatrix} \begin{pmatrix} 1 \end{pmatrix} \rightarrow \begin{pmatrix} h \end{pmatrix}$$

Simplified version

$$\begin{pmatrix} 1 \\ 2 \end{pmatrix} \begin{pmatrix} 1 \end{pmatrix} \rightarrow \begin{pmatrix} h_1 \\ h_2 \end{pmatrix}$$

Where is the synapse/connection?

Matrix notation

$$(\textcolor{red}{x})(\textcolor{blue}{1}) \rightarrow (h)$$

Simplified version

Where is the synapse/connection?

$$\begin{pmatrix} 1 \\ 2 \\ \textcolor{red}{3} \end{pmatrix} (\textcolor{blue}{1}) \rightarrow \begin{pmatrix} h_1 \\ h_2 \\ h_3 \end{pmatrix}$$

A neuron and the **matrix** to describe the action of it.

A Neuron with Multiple Inputs

Matrix notation

$$(x_1, x_2, x_3, x_4) \begin{pmatrix} 1 \\ 2 \\ 1 \\ 3 \end{pmatrix} \rightarrow (h)$$

$$\begin{pmatrix} 0, 0, 0, 1 \\ 0, 1, 0, 1 \\ 0, 0, 1, 1 \\ 1, 1, 0, 0 \\ 1, 1, 1, 1 \end{pmatrix} \begin{pmatrix} 1 \\ 2 \\ 1 \\ 3 \end{pmatrix} \rightarrow \begin{pmatrix} h_1 \\ h_2 \\ h_3 \\ h_4 \\ h_5 \end{pmatrix}$$

Weighted Sum

$$h = w_1 \cdot x_1 + w_2 \cdot x_2 + w_3 \cdot x_3 + w_4 \cdot x_4$$

if the input values are (0,0,0,1), then h is ..

Real operation of a neuron

- More than weighted sum
- Thresholding
- signal ON if the weighted sum is greater than T
- otherwise signal OFF

Thresholding

Weighted sum and thresholding

$$h = \begin{cases} 1 & \text{if } x_1 + 2x_2 + x_3 + 3x_4 > T \\ 0 & \text{otherwise} \end{cases}$$

Drawing
of a neuron

Matrix Notation

Equation

Drawing

Matrix notation

Equation

Drawing

Matrix notation

Equation

$$h = 1 \cdot x_1 + 2 \cdot 1 + 1 \cdot x_3 + 3 \cdot x_4$$

Drawing

Matrix notation

$$(x_1, x_2, x_3, x_4) \begin{pmatrix} 1 \\ 2 \\ 1 \\ 3 \end{pmatrix} \rightarrow (h)$$

Equation

$$h = 1 \cdot x_1 + 2 \cdot 1 + 1 \cdot x_3 + 3 \cdot x_4$$

What is learning again?

Drawing

Matrix notation

$$(x_1, x_2, x_3, x_4) \begin{pmatrix} 1 \\ 2 \\ 1 \\ 3 \end{pmatrix} \rightarrow (h)$$

Equation

$$h = 1 \cdot x_1 + 2 \cdot 1 + 1 \cdot x_3 + 3 \cdot x_4$$

How do we update it?
